Abstracts

The global N,N-Diethylaminoethyl Methacrylate(DEAEMA) market size is expected to reach \$ 40.89 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

N,N-Diethylaminoethyl Methacrylate(DEAEMA) is a functional acrylic monomer containing tertiary amine groups. Its molecular structure has both a methyl methacrylate double bond that can undergo free radical polymerization and a diethylamino side group that can undergo protonation reactions. DEAEMA can introduce cationic functions and pH response characteristics during the polymerization process, and is widely used in the preparation of water-soluble polymers, cationic resins, and smart responsive materials. DEAEMA is suitable for applications in coatings, adhesives, water treatment flocculants, and biomedical polymers. In 2025, global N,N-Diethylaminoethyl Methacrylate (DEAEMA) production reached approximately 8,756 MT, with an average global market price of around US\$ 3,261 per MT.

DEAEMA belongs to small volume high value-added fine chemicals, with a relatively small overall market size but strong technical attributes. The demand mainly comes from the fields of water treatment, papermaking chemicals, and functional polymers. In recent years, driven by stricter environmental regulations and increasing demand for water treatment, DEAEMA has shown a steady growth trend. At the same time, it has potential incremental space in emerging applications such as intelligent response materials and biomedical materials; The supply side is mainly based on customized production, with relatively low industry concentration. However, there are still certain technical barriers to high-purity and electronic grade products. In the future, the market will develop towards high-performance, multifunctional, and high-purity directions.
