Abstracts

Noble gases are tasteless, odorless, colorless and inflammable; they also have a volatile nature, allowing changes as per application which gains a competitive edge over other regular gases.

Scope of the Report:

This report focuses on the Noble Gases in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Demand for noble gases has been rising particularly in energy-efficient lighting systems and in window-insulation. Since noble gases are inert in nature and do not react with other elements, demand has increased in applications where oxidation or other reactions are undesirable. Non-reaction to heat makes noble gases an ideal substance for application in bulbs and tubes, which is expected to boost their demand over the forecast period. In order to increase capacity production, various new noble gas manufacturing plants are expected to be set up to meet current demand, which is likely to increase demand later on.

The worldwide market for Noble Gases is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
