The Noble Metal Refining Service means that professional service providers use raw materials, scraps or semi-finished products containing precious metals such as gold, silver, platinum, palladium, rhodium, iridium, osmium, ruthenium, etc. to separate, purify and purify the precious metals to industry standard high purity (such as 99.9%, 99.99%, 99.999%) through purification processes such as fire method, wet method, and electrolysis. Above), while providing integrated industrial services such as content testing, pricing recovery, processing and molding, precious metal custody or resale.

The market for noble metal refining services is driven by factors such as the demand for precious metals, the recycling and reuse of valuable materials, and the need for sustainable resource management. Refining services are essential in ensuring the purity and quality of precious metals, as well as maximizing their value through extraction and recovery processes. Noble metal refining services typically involve processes such as melting, assaying, chemical treatment, and electrolysis to separate and purify precious metals from other materials. The recovered metals can then be reused in various industries, including jewelry manufacturing, electronics, automotive, and industrial applications.
