According to our (Global Info Research) latest study, the global Nofluanidazole market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Noflubenzuron is a benzoylurea insecticide that inhibits the synthesis of chitin in insects, thereby preventing their normal molting and development, and ultimately leading to the death of insects. It is highly selective for larvae and is therefore widely used in agriculture to control pests on a variety of crops, such as cotton, fruit trees, and vegetables. Noflubenzuron is widely recognized for its low toxicity to non-target organisms and low environmental residues.
