Annual production capacity is 6.5 million units. Gross Profit Margin: 33%. A Noise or Decibel Meter is an electronic device designed to measure sound pressure levels in the environment. It quantifies noise intensity in decibels (dB), allowing assessment of environmental noise, industrial sound exposure, and compliance with regulations. The noise meter industry chain starts with upstream suppliers providing sensors, microphones, electronic components, and materials. Midstream manufacturers assemble these into handheld, portable, or fixed sound level meters with calibration and software integration. Downstream, products are distributed through industrial suppliers, environmental monitoring agencies, retailers, and e-commerce platforms, serving construction, industrial, research, environmental, and regulatory organizations. Noise meters are essential tools for health, safety, and regulatory compliance.
