Noise test software is a software tool used to measure, analyze and record noise levels and their characteristics. It is usually used in conjunction with acoustic sensors or measuring instruments to monitor environmental noise, equipment noise or the acoustic conditions of a specific area in real time. The software can provide functions such as spectrum analysis, sound pressure level assessment, data visualization and report generation, and is widely used in environmental monitoring, industrial noise control, architectural acoustic design and automotive noise testing. Through these analyses, users can identify noise sources, assess the impact of noise on human health and the environment, and formulate corresponding noise management measures.
