According to our (Global Info Research) latest study, the global Non-Adhesive Liquid Embolic Agents market size was valued at US\$ 157 million in 2025 and is forecast to a readjusted size of US\$ 258 million by 2032 with a CAGR of 7.4% during review period.

Non-adhesive liquid embolic agents are a type of medical substance used in interventional procedures, particularly in endovascular embolization treatments, to block blood vessels. Unlike traditional adhesive embolic agents, which rely on chemical bonding to vessel walls, non-adhesive liquid embolics do not adhere to tissue but instead occlude blood flow by physically plugging the vessel lumen. These agents are typically delivered through a catheter and are designed to solidify or gel after being injected, forming a stable mass that prevents further blood flow. They are often used for treating conditions like arteriovenous malformations (AVMs), tumors, or aneurysms, where precise occlusion of abnormal blood vessels is required.
