## Abstracts

The global Non-adiabatic Fixed Bed Reactor Reactor market size is expected to reach \$ 863 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

In 2025, global sales of non-adiabatic fixed bed reactors reached 4,451 units, with an average price of US\$135,490 per unit.

A non-adiabatic fixed bed reactor (also known as a heat exchange fixed bed reactor) is a fixed bed reactor where heat exchange occurs continuously between the reaction bed and the external environment. It is commonly used in gas-solid catalytic reaction processes with high heat effects and stringent temperature control requirements.

Core raw materials include a metal shell (304/316 stainless steel, Inconel, titanium alloys, and other corrosion-resistant alloys), catalyst particles (active component + carrier + additives), and heat exchange medium (molten salt, heat transfer oil, or high-pressure water/steam). In the cost structure, the manufacturing cost of the special alloy shell and multi-tube sheet accounts for the highest proportion, reaching over 50% of the total equipment price; catalyst costs fluctuate depending on the amount of precious metal active component used, typically accounting for 15%–25%; the remainder consists of heat exchange medium, insulation layer, instrumentation and valves, and on-site installation and commissioning costs.
