According to our (Global Info Research) latest study, the global Non-Agricultural Controlled Release Fertilizer Granules market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Non-agricultural controlled-release fertilizer granules are a type of fertilizer specifically used for gardening, landscaping, lawn care, and home plant cultivation. It uses controlled-release technology to encapsulate nutrients in special materials and gradually release them to meet the continuous nutritional needs of plants over a longer period of time. Compared with traditional fertilizers, controlled-release fertilizer granules can effectively avoid waste or environmental pollution caused by excessive nutrient release, improve fertilizer efficiency, and reduce the frequency of fertilization. This type of fertilizer is often used in non-agricultural scenarios to help optimize plant growth and maintain ecological health.

Non-agricultural controlled-release fertilizer particles have important application prospects in the fields of gardening, greening and lawn maintenance. Its controlled-release technology can gradually release nutrients according to the growth cycle of plants, avoiding the waste and environmental pollution caused by the rapid release of traditional fertilizers. Especially in urban greening and landscape maintenance, this feature can significantly reduce the frequency of fertilizer application and reduce

maintenance costs. At the same time, the protective effect of controlled-release fertilizers on soil and water quality makes them more environmentally friendly and in line with the trend of sustainable development. Although its cost may be higher than traditional fertilizers, in the long run, the reduced labor and environmental burden make it have good market competitiveness.
