According to our (Global Info Research) latest study, the global Non-Asbestos Fibre Jointing Material market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Non-asbestos fibre jointing material is a modern gasket material designed as a safer alternative to traditional asbestos-based products. It is composed of a mixture of synthetic fibres, organic fibres, fillers, and rubber binders such as nitrile, EPDM, or neoprene, which are compressed to form dense sheets. These materials provide excellent sealing capabilities, along with resistance to heat, pressure, chemicals, and oils, making them suitable for use in various industrial applications. Non-asbestos fibre jointing materials are commonly used in the automotive, petrochemical, power generation, and marine industries for creating gaskets and seals in machinery, pipes, and flanges. The shift to non-asbestos alternatives came about due to the health hazards associated with asbestos, which can cause serious respiratory illnesses when inhaled. Non-asbestos materials offer a similar performance to compressed asbestos fibre (CAF) but without the risks to human health and the environment. These materials can be tailored to meet specific application requirements, such as high temperature and chemical resistance, and have become the industry standard for sealing and jointing in critical environments. Their versatility and safety make non-asbestos fibre jointing materials a preferred choice across many sectors.
