Abstracts

The global Non-bonded Flexible Composite Pipe market size is expected to reach \$ 235 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

In 2025, global Non-bonded Flexible Composite Pipe approximately 7526 km, with an average global market price of around US\$ 18 per meter. Gross margin is about 49%. The cost is 9 usd. The Production is about 9000 km. Non-bonded Flexible Composite Pipe includes pipe body and joints, and the pipe body from inside to outside mainly includes skeleton layer, inner lining layer, compressive armor layer, wear-resistant layer, tensile armor layer, intermediate layer and outer cladding layer; the inner part consists of several independent layers, and there is no fixed connection between layers, in which the pipe's bending resistance is also improved, which is more conducive to the relative displacement between layers. Unbonded flexible pipelines are one of the most important pieces of equipment in offshore engineering, used to transport oil and gas between offshore floats and subsea wells.

1. Expansion with deepwater and ultra-deepwater offshore development

As offshore oil and gas exploration moves into deeper waters, non-bonded flexible composite pipes are increasingly preferred due to their fatigue resistance, dynamic load tolerance, and seabed movement adaptability, particularly in risers and subsea flowlines.

2. Advanced corrosion-resistant material systems

The industry is shifting toward high-strength armor materials, thermoplastic liners, and chemically resistant polymers to handle high-temperature, high-pressure and sour service environments (H₂S and CO₂), reducing maintenance and extending service life.

3. Application in energy transition infrastructure

Flexible composite pipes are expanding beyond hydrocarbons into hydrogen transport, CO₂ reinjection (CCUS), offshore renewables, and subsea energy transmission, leveraging their corrosion resistance and durability.

4. Higher pressure and temperature ratings (HPHT)

Ongoing engineering improvements are enabling higher pressure and temperature capabilities through enhanced armor design and liner materials, supporting increasingly demanding well conditions.

5. Modularization and faster installation methods

Because flexible pipes can be spooled and deployed rapidly, future projects will emphasize prefabricated pipeline modules and fast offshore installation, reducing vessel time and overall project cost.
