The global Non-centralized Automated Feed Systems market size is expected to reach \$ 368.4 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

Non-centralized automated feed systems dispense feed to the fish through individual, independent feeders located at the tank. There is a huge range of feeders in this category but generally, each feeder is located at the tank with its own silo. Feed is dispensed or spread or shot (lots of variety) to the fish based on a simple timer or control program. These feeders come in all shapes, sizes and price ranges and many different models can be found on a single farm.
