Non-conductive hose is a type of hose that is designed to prevent the flow of electrical current through it. This type of hose is commonly used in industrial and construction settings where there is a risk of electrical hazards. The purpose of a non-conductive hose is to prevent electrical current from passing through the hose and potentially causing harm to workers or damaging equipment. This is particularly important in applications where hoses are used to transfer fluids or gases that are under high pressure or contain conductive materials.
