According to our (Global Info Research) latest study, the global Non-Conductive Thermoplastic Hose market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Non-conductive thermoplastic hose is a type of hose that is designed to be electrically non-conductive. It is made from thermoplastic materials such as polyethylene, polyurethane, or nylon, which have low conductivity and are able to withstand high temperatures and pressures. Non-conductive thermoplastic hoses are made by incorporating special additives into the thermoplastic material during the manufacturing process. These additives help to prevent the buildup of static electricity within the hose, which could potentially cause sparks and ignite flammable substances. These hoses are used in a variety of industries where electrical conductivity must be avoided, such as in the transfer of fuels, chemicals, or other flammable materials. They are also used in hydraulic and pneumatic systems, as well as in air and water supply lines.
