Non-contact Dispenser is a type of dispensing system used in various manufacturing processes to apply liquids, adhesives, or coatings without physical contact with the substrate or workpiece. This technology employs methods such as air pressure, ultrasonic vibrations, or electromagnetic fields to dispense materials accurately onto surfaces with minimal risk of contamination or damage. Non-contact dispensers are ideal for delicate substrates, high-speed production lines, and applications requiring precise control over material deposition. Industries such as electronics, medical devices, automotive, and aerospace utilize non-contact dispensing for tasks like soldering, conformal coating, and precision adhesive application to enhance product quality and manufacturing efficiency.
