According to our (Global Info Research) latest study, the global Non-contact Laser Doppler Vibrometer market size was valued at US\$ 23.4 million in 2024 and is forecast to a readjusted size of USD 30.3 million by 2031 with a CAGR of 3.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The non-contact laser Doppler vibrometer is an instrument that uses the laser Doppler effect to accurately measure the vibration velocity of an object's surface. It emits a laser beam to the object being measured and receives the reflected light wave, and obtains vibration data in real time and contactlessly based on the frequency shift change. It is widely used in mechanical engineering, aerospace, automobile manufacturing and other fields, providing high-precision and high-resolution dynamic characteristics analysis, and is particularly suitable for structures with complex geometries or where it is difficult to install sensors.

This report is a detailed and comprehensive analysis for global Non-contact Laser Doppler Vibrometer market.
