## Abstracts

The global Non-Contact Spectrophotometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Non-contact spectrophotometers are the instruments used to conduct non-contact spectrophotometry processes. As the name suggests, these devices measure color without making contact with the samples. Non-contact spectrophotometry combines spectrophotometry with color imaging procedures to characterize highly complex materials. Like standard spectrophotometry, non-contact spectrophotometry facilitates the quantitative measurement of light absorption over a range of wavelengths to measure the color of a sample. However, this particular technique accomplishes this task without touching the sample surface, facilitating irregular sample measurement with greater accuracy and efficiency.

This report studies the global Non-Contact Spectrophotometer production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Non-Contact Spectrophotometer, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
