Abstracts

The global Non-contact Tonometer market size is expected to reach \$ 120 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

A non-contact tonometer is an ophthalmic diagnostic device used to measure intraocular pressure (IOP) by directing a brief pulse of air onto the cornea and analyzing the corneal deformation or rebound using optical sensors. Unlike contact tonometry methods, non-contact tonometers do not require corneal contact or topical anesthesia, offering fast measurement, ease of use, improved patient comfort, and reduced risk of cross-contamination. They are widely used in ophthalmology clinics, vision care centers, health check-up facilities, and large-scale eye screening programs, particularly for glaucoma screening and routine IOP assessment.

The non-contact tonometer market is driven by the increasing prevalence of glaucoma and other eye-related conditions worldwide, supported by population aging and rising visual stress. Growing demand from health check-up centers and primary healthcare facilities for fast and standardized eye screening equipment is further expanding adoption. In addition, greater emphasis on infection control and patient safety, together with advancements in automation, digital data management, and integration with electronic medical record systems, continues to enhance the attractiveness and penetration of non-contact tonometers in routine examinations and screening applications.

Global Non-Contact Tonometers key players include Topcon, Nidek, Reichert, Keeler (Halma), Canon, etc. Global top five manufacturers hold a share about 65%. Asia-Pacific is the largest market, with a share over 40%, followed by North America and Europe, both have a share about 50 percent. In terms of product, Desktop Type is the largest segment, with a share over 95%. And in terms of end user, the largest end user

is Hospital, followed by Ophthalmology Clinic.
