The global Non-Destructive Testing Ultrasonic Thickness Gauges market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

NDT Ultrasonic Thickness Gauge is a non-destructive testing instrument that evaluates the thickness of a part by measuring the time it takes for sound to travel from a transducer through the material to the back end of the part, and then measuring the reflection time back to the sensor. The instrument then determines the thickness based on the speed of sound waves traveling through the material being measured.
