According to our (Global Info Research) latest study, the global Non-enveloping Worm Gear market size was valued at US\$ 39.5 million in 2024 and is forecast to a readjusted size of USD 53.9 million by 2031 with a CAGR of 4.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A non-enveloping worm gear is a type of worm gear where the worm wheel does not fully wrap around or enclose the worm shaft. In this design, the contact between the worm and worm wheel is limited to specific regions, rather than the entire surface. This setup can reduce friction and simplify construction but may result in less efficient power transmission compared to fully enveloping worm gears.
