## Abstracts

According to our (Global Info Research) latest study, the global Non Evaporable Getter Materials market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Non-evaporable getter (NEG) materials are specialized substances used to maintain a vacuum by removing trace gases and contaminants from the environment. These materials, typically composed of alloys such as titanium-zirconium-vanadium (Ti-Zr-V), are activated at high temperatures and then function at lower temperatures to absorb residual gases through a chemical reaction. Unlike other getters that rely on evaporation, NEG materials do not require regular replacement or reactivation, making them highly effective and long-lasting for vacuum systems. They are widely used in applications such as particle accelerators, vacuum tubes, and space technology, where maintaining a high-quality vacuum is crucial for optimal performance and longevity.
