Abstracts

The global Non-Filtering Cloth Vacuum Filters market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Non-Filtering Cloth Vacuum Filter has the advantages of no sewage discharge, low conversion rate of dry filter mud, high production efficiency, and high degree of automation. It is most commonly used by sugar companies for raw sugar production and filtration of sulfurous acid sedimentation tank sludge. The drum is the main component of the filter cloth-less rotary vacuum filter. It consists of the drum body, stainless steel filter screen, plastic mesh plate, sewage pipe, vacuum distribution head, etc. Its function is to separate the filtered sewage from the filter mud. The part of the tank is immersed in the mud. The working speed depends on the quality and type of the mud. Compared with the filter cloth vacuum filter, Non-Filtering Cloth Vacuum Filter has lower brightness and higher production efficiency. The most important thing is that it can achieve zero discharge from the sewage pool.

This report studies the global Non-Filtering Cloth Vacuum Filters production, demand, key manufacturers, and key regions.
