According to our (Global Info Research) latest study, the global Non-Food Metal Packaging Can market size was valued at US\$ 5765 million in 2025 and is forecast to a readjusted size of US\$ 8605 million by 2032 with a CAGR of 6.0% during review period.

Non-food metal packaging cans are metal containers specifically designed for holding substances other than food and beverages. They are typically made of tinplate, chrome-plated steel, or aluminum, possessing excellent sealing properties, corrosion resistance, and compressive strength. Suitable for packaging paints, coatings, lubricants, chemicals, pesticides, adhesives, scented candles, and other industrial or daily necessities, their structures can be easy-open, screw-top, drum-type, or can-type designs, providing reliable and safe product protection during storage, transportation, and use.

The non-food metal packaging can industry chain begins with upstream metal material and auxiliary material supply, mainly including tinplate, chrome-plated steel, aluminum steel, as well as paints, inks, and sealants. The midstream is the non-food metal can manufacturing stage, producing aerosol cans, chemical cans, paint cans, lubricant cans, etc., through processes such as stamping, stretching, welding, painting, and testing. Downstream applications are widespread in daily chemicals, industrial chemicals, automotive maintenance, coatings, agrochemicals, and medical/laboratory supplies, with customized printing and after-sales services also provided. In terms of profitability, this industry as a whole belongs to the low-to-medium profit margin manufacturing sector, and is significantly affected by fluctuations in raw material prices. The industry's average gross profit margin is typically between 12% and 20%, with large-scale enterprises and high-value-added customized products approaching the upper limit.

Regarding capacity utilization, the demand for non-food metal cans is relatively stable but exhibits some cyclical nature. The industry's normal capacity utilization rate is approximately 65%–80%, which can rise to over 80% during peak seasons for coatings, daily chemicals, and industrial products. Small and medium-sized enterprises face significant pressure during the off-season.

In 2024, global production of non-food metal packaging cans reached 1.12 billion units, with an average selling price of US\$5 per unit.
