## Abstracts

According to our (Global Info Research) latest study, the global Non-Halogenated Heterocyclic Building Blocks market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Building block typically refers to a chemical compound or a small molecule that serves as a fundamental unit for the synthesis of more complex molecules or drugs. These building blocks are essential components in the process of organic synthesis, which involves the creation of various chemical compounds through a series of chemical reactions.

The pharmaceutical industry was witnessing an increased reliance on Contract Manufacturing Organizations (CMOs) for the production of building blocks. CMOs offer expertise, flexibility, and cost efficiency in the synthesis of these essential components. The pharmaceutical supply chain was becoming more globalized, with companies sourcing building blocks from manufacturers around the world. This trend aimed at diversifying supply sources and mitigating risks associated with regional disruptions.
