Abstracts

According to our (Global Info Research) latest study, the global Non-invasive Blood Glucose Detector market size was valued at US\$ 5980 million in 2025 and is forecast to a readjusted size of US\$ 27090 million by 2032 with a CAGR of 24.4% during review period.

A non-invasive blood glucose meter is a device that monitors blood sugar without puncturing the skin to obtain a blood sample. Such monitors typically use infrared light, spectroscopy, or other sensing technology to measure blood glucose levels without the need to prick the skin to obtain a blood sample. Non-invasive blood glucose monitoring can avoid the pain of POCT and CGM puncture wounds, reduce testing costs, and avoid safety issues such as blood infections and diseases. It can realize real-time monitoring of detection results and obtain dynamic changes in blood sugar trends. Judging from the products on the market, the current non-invasive blood glucose monitoring principles can be roughly divided into measuring blood substitutes and micro-osmosis methods, biosensor methods, spectroscopy methods, metabolic conservation methods, etc. The non-invasive blood glucose meter can be integrated into a device or system as a multi-parameter module, such as the non-invasive module part of a hybrid blood glucose meter, or it can be a wearable non-invasive blood glucose device/non-invasive blood glucose sensor, and also includes a flexible non-invasive blood glucose sensor. Although non-invasive blood glucose meters are conceptually very attractive, there are still relatively few reliable and accurate non-invasive blood glucose meters on the market today. The accuracy and reliability of these devices can be affected by a variety of factors, such as skin pigment, temperature, humidity, etc.

Global key players of Non-invasive Blood Glucose Detector include Abbott, Dexcom,

Ghalife, etc. The top three players hold a share over 65%. Europe is the largest market, and has a share about 36%, followed by Asia-Pacific and North America with share 34% and 25%, separately. In terms of product type, Wearable Devices is the largest segment, occupied for a share of 95%. In terms of application, At-home Use has a share about 94 percent.
