Abstracts

Blood glucose monitoring is essential to assess pancreatic islet function and determine optimal medication regimen. However, most current blood glucose meters use invasive technology, which can lead to pain and infection. Non-invasive blood glucose monitoring technology has received widespread attention as a potential solution to overcome the limitations of current monitoring methods. At this stage, non-invasive blood glucose monitoring equipment developed by various companies uses different types of sensing methods such as flexible sensors, electromagnetic sensors, microwave sensors, and near-infrared spectrometers.

According to our (Global Info Research) latest study, the global Non-invasive Blood Glucose Sensor market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
