Abstracts

Cryogenic lipolysis (also known as Cool Sculpting) is a procedure that uses a targeted cooling process that kills the fat cells underneath the skin, freezing them to the point of elimination. Laser lipolysis is a minimally invasive technology that liquefies fat for removal. It is a laser-based procedure that breaks up and removes fat cells in areas such as under the chin, neck, and jowls or areas with loose skin such as the arms. It also contracts collagen and tightens the skin.
