Abstracts

The global Non-invasive Pelvic Floor Muscle Repair Device market size is expected to reach \$ 1970 million by 2032, rising at a market growth of 7.5% CAGR during the forecast period (2026-2032).

In 2025, global Non-invasive Pelvic Floor Muscle Repair Device production reached approximately 135 K units, with an average global market price of around 8,500 US\$/unit.

Non-invasive Pelvic Floor Muscle Repair Device refers to medical or rehabilitation equipment used to restore, strengthen, or train pelvic floor muscles without surgery or implantation. It mainly includes extracorporeal magnetic stimulation chairs, neuromuscular electrical stimulation devices, EMG/pressure biofeedback systems, and app-connected pelvic floor trainers. These devices are used for urinary incontinence, postpartum pelvic floor recovery, pelvic organ support, sexual health rehabilitation, and age-related pelvic muscle weakness.

The average single-line production capacity of Non-invasive Pelvic Floor Muscle Repair Device is 4,000 units, the average gross profit margin was 44.7%.

The upstream includes electronic components, sensors, electrodes, magnetic stimulation modules, motors, control boards, medical plastics, silicone materials, batteries, software algorithms, and medical-grade textiles. The midstream is composed of device manufacturers responsible for R&D, system integration, clinical validation, production, regulatory registration, branding, and after-sales service. The downstream mainly covers hospitals, rehabilitation centers, obstetrics and gynecology clinics,

urogynecology departments, physiotherapy institutions, postpartum recovery centers, and home-use consumers.

The cost structure is mainly led by electronic and stimulation modules, accounting for about 30%-40%, including magnetic coils, electrical stimulation circuits, sensors, chips, and control systems. Structural parts, medical plastics, silicone, electrodes, and consumables account for about 15%-25%. Software, algorithms, app development, and system integration account for about 10%-15%. Manufacturing, assembly, testing, quality control, and certification account for about 15%-20%. Packaging, logistics, warranty, clinical support, and after-sales service account for about 10%-15%.

Demand is driven by rising postpartum rehabilitation awareness, aging populations, increasing urinary incontinence prevalence, and the shift from surgical treatment to conservative rehabilitation. Hospitals and clinics need higher-end magnetic stimulation and biofeedback systems, while home users prefer portable and app-connected pelvic floor trainers. Business opportunities are strong in women's health, postpartum recovery, urogynecology rehabilitation, digital therapeutics, and home healthcare, with future growth supported by product miniaturization, AI-guided training, remote monitoring, and wider acceptance of non-invasive pelvic health management.
