## Abstracts

According to our (Global Info Research) latest study, the global Non-Latching Power Relay market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Non-latching relays have only one stable position - the 'off' or de-energized position. They will remain in this unpowered state, not receiving power. Most power relays are monostable relays with a neutral coil system. When electricity passes through the coil circuit, the relay switches to the energized position. An internal coil creates a magnetic force that holds the energized position. When power is turned off, the relay returns to the de-energized position.
