Abstracts

The global Non-metallic Expansion Joints market size is expected to reach \$ 10725 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Non metallic expansion joints are flexible connection compensation components used in pipeline systems, mainly made of non-metallic materials such as rubber, fabric composite materials, or polytetrafluoroethylene. They are used to absorb displacement and stress caused by temperature changes, vibration, pressure fluctuations, or installation errors in pipelines, thereby protecting the safe operation of pipelines, equipment, and connecting components. Compared to metal expansion joints, it has better corrosion resistance, vibration and noise reduction capabilities, and lower stiffness. It is commonly used in chemical, power, metallurgical, water treatment, environmental protection, and HVAC systems. In 2025, global Non-metallic Expansion Joints production reached approximately 9,853 K Units, with an average global market price of around US\$ 758 per unit.

With the development of industrial equipment towards high temperature and high corrosion conditions and the improvement of environmental emission standards, the demand for non-metallic expansion joints continues to grow. The chemical and flue gas treatment fields are the core drivers, while water treatment and new energy related pipeline systems are also driving incremental demand; In terms of competitive landscape, small and medium-sized professional manufacturing enterprises are the main players, and product differentiation is mainly reflected in material formulas, temperature and pressure resistance levels, and customized design capabilities. The overall market shows a trend of steady expansion and technological upgrading in parallel.
