Abstracts

According to our (Global Info Research) latest study, the global Non-metallic Mineral Exploration market size was valued at US\$ 4873 million in 2025 and is forecast to a readjusted size of US\$ 6886 million by 2032 with a CAGR of 5.1% during review period.

Non-metallic mineral exploration refers to systematic geological surveys and resource evaluation activities targeting mineral resources that contain little or no metallic elements. Its core objective is to determine the location, scale, grade, and exploitability of ore bodies through geophysical surveys, geochemical analysis, drilling verification, and resource modeling, providing a basis for subsequent mine development and resource utilization decisions. This industry typically covers industrial minerals, building material minerals, and some strategic non-metallic minerals, serving as a crucial upstream link in the mining industry and a fundamental support link in the supply chain of raw materials for new energy and modern industries.

The non-metallic mineral exploration industry is currently in a phase of structural growth, driven primarily by global energy transition, urbanization, and the upgrading of demand for new materials. With the rapid expansion of industries such as electric vehicles, energy storage systems, photovoltaic glass, semiconductor materials, and high-end ceramics, the demand for key non-metallic minerals such as lithium, graphite, silicon, phosphorus, and rare earths has increased significantly, driving exploration activities towards "new energy minerals + strategic resources." Simultaneously, declining global mineral resource grades, depletion of easily accessible resources, and extended development cycles for new mines have continuously increased the importance of early-stage exploration. With countries placing greater emphasis on the security of critical mineral supply chains, governments and large mining companies are increasing their

investment in the exploration phase, gradually transforming the industry from a traditional cyclical resource business into a "strategic resource security industry," thus enhancing the certainty of long-term growth.
