According to our (Global Info Research) latest study, the global Non-Metallic Wear Pad market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Non-metallic wear pad refers to a type of component or material used to reduce friction and wear between moving parts in various applications. Unlike traditional metallic wear pads made of metals like steel or bronze, non-metallic wear pads are typically made from materials like polymers, composites, or plastics. These non-metallic materials offer advantages such as low friction coefficient, durability, corrosion resistance, and noise reduction. Non-metallic wear pads are commonly used in industries such as automotive, aerospace, machinery, and manufacturing to protect and extend the service life of equipment and machinery by minimizing friction, vibration, and damage caused by wear and tear.
