Abstracts

According to our (Global Info Research) latest study, the global Non-migratory Antistatic Agent market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Non-migratory antistatic agent form a percolating network similar to conductive carbon black, and therefore fairly high loadings of these nontraditional antistats are required to ensure good antistatic properties in polyolefin films. The function of certain non-migratory antistats is humidity independent.

Non-migrating additives do not move or migrate through or out of the polymer. They work by using a co-continuous ion conductive polymer phase. Ions acting as charge carriers within the additive will dissipate the static field.
