Abstracts

The global Non-migratory Antistatic Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Non-migratory antistatic agent form a percolating network similar to conductive carbon black, and therefore fairly high loadings of these nontraditional antistats are required to ensure good antistatic properties in polyolefin films. The function of certain non-migratory antistats is humidity independent.

Non-migrating additives do not move or migrate through or out of the polymer. They work by using a co-continuous ion conductive polymer phase. Ions acting as charge carriers within the additive will dissipate the static field.

This report studies the global Non-migratory Antistatic Agent production, demand, key manufacturers, and key regions.
