According to our (Global Info Research) latest study, the global Non-Native Database Management Systems market size was valued at USD 489.8 million in 2023 and is forecast to a readjusted size of USD 728.6 million by 2030 with a CAGR of 5.8% during review period.

Non-Native Database Management Systems are systems that provide database tools for external users to access data with a different query language. Non-Native Database Management Systems can integrate data in different query languages, which makes them compatible with SQL and NoSQL databases. Non-Native Database Management Systems are also known as NoSQL databases, which are databases that use a non-relational data model to store and retrieve data. NoSQL databases are designed for different use cases or data types, such as key-value pairs, documents, graphs, or columns. NoSQL databases offer advantages such as flexibility, scalability, performance, and availability over traditional relational databases.

The industry trend of Non-Native Database Management Systems is expected to be positive and growing, as more organizations adopt NoSQL databases for their big data and real-time web applications. According to our report, the global DBMS market grew by 17.1% to reach \$64.8 billion in 2020, driven by cloud dbPaaS growth. The nonrelational DBMS segment and relational DBMS segment grew by 34.5% and 15.2%, respectively. Prerelational-era DBMS continued its decline. The report also predicts that the future of the DBMS market is cloud-based, as more organizations migrate their data warehouses and data lakes to cloud storage systems. The report suggests some key factors for choosing a cloud-based DBMS service, such as cost optimization, scalability, performance, security, and compatibility.
