According to our (Global Info Research) latest study, the global Non-Oxidizing Biocides for RO Membranes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Non-oxidizing biocides (NOBs) are compounds that act against bacteria through several mechanisms: preventing duplication, stopping cellular processes and metabolic reactions or destroying the cell wall. The biocidal action is carried out through specific mechanisms that make NOBs characterized by a major tendency to induce resistance phenomenon. Non-oxidizing biocides do not act through redox reaction and, in general, they are less reactive than OBs - indeed, the time required to fully eliminate bacteria is longer (from several hours to one day). Being less reactive, NOBs can be stored for a very long period and they are less corrosive against materials. Another advantage of non-oxidizing biocides is the great stability in solution - they have low sensitivity to variations in pH and temperature, a prolonged effect and the biocidal activity is easy to control.
