Abstracts

Non-porous microcrystalline stone, also known as artificial white marble, is a new type of high-grade environmental protection stone with many physical and chemical indicators superior to ordinary microcrystalline stone and natural stone. It has pure color, no discoloration, no radiation, no pollution absorption, high hardness, acid and alkali resistance, wear resistance and other characteristics. Its biggest feature is: no air holes, no miscellaneous spots, high gloss, zero water absorption, and can be polished and refurbished. You make up for the defects of ordinary microcrystalline stones and natural stones. It is suitable for high-end decoration places such as exterior walls, interior walls, floors, columns, wash basins, and countertops.
