According to our (Global Info Research) latest study, the global Non-Radioactive Nucleic Acid Labeling Product market size was valued at US\$ 402 million in 2024 and is forecast to a readjusted size of USD 631 million by 2031 with a CAGR of 6.7% during review period.

In recent years, non-radioactive nucleic acid labeling and detection methodologies have become available in response to a desire by researchers and their institutions to move away from the use of radioisotopes. Advancements made in the areas of chemiluminescence and fluorescence have allowed for an easier transition. In non-radioactive assays, signal is generated through an enzymatic reaction with a chemiluminescent or chromogenic substrate; alternatively, detection can occur through the appropriate excitation and emission of a fluorophore-labeled probe.

Global Non-Radioactive Nucleic Acid Labeling Product key players include Thermo Fisher Scientific, Roche, Promega, etc. Global top three manufacturers hold a share over 40%.

United States is the largest market, with a share over 40%, followed by China and Europe, both have a share about 35 percent.

In terms of product, DIG System is the largest segment, with a share about 33%. And in terms of application, the largest application is DNA Labeling, followed by RNA Labeling, Oligonucleotide Labeling.
