## Abstracts

The global Non-resorbable Membranes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The widely used non-resorbable barrier membranes are made of polytetrafluoroethylene (PTFE), expanded polytetrafluoroethylene (e-PTFE), titanium (Ti), and titanium-reinforced PTFE (Ti-PTFE) . Various fabrication methods are used to create dense or porous variations of these materials. Because they are biologically inert and chemically stable, PTFE and e-PTFE were appealing first-generation biomaterials for use in GBR and GTR procedures. Although PTFE and titanium are non-resorbable and require a second surgery, surgeons continue their use due to their surgical handling properties, malleability, structural rigidity in preventing collapse, and space maintenance for large ridge defects.

This report studies the global Non-resorbable Membranes production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Non-resorbable Membranes, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
