Abstracts

According to our (Global Info Research) latest study, the global Non-self-Priming Clean Water Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The non-self-priming clean water pump is a centrifugal pump, also called a single-stage centrifugal pump. Unlike self-priming clean water pumps, non-self-priming clean water pumps need to drain the liquid from the pump body before starting to work properly. Therefore, it is suitable for situations where the liquid level is relatively low and requires external water diversion or a suction pipe under the pump. The structure of the non-self-priming clean water pump is relatively simple, consisting of a pump body, an impeller, a bearing, a seal and other components. The pump body and impeller are usually made of cast iron or stainless steel, and the bearings and sealing parts are made of high-strength materials to ensure the stability and reliability of the pump.

The Global Info Research report includes an overview of the development of the Non-self-Priming Clean Water Pump industry chain, the market status of Achitechive (Single Stage Single Suction Centrifugal Pump, Single Stage Double Suction Centrifugal Pump), Agricultural Industry (Single Stage Single Suction Centrifugal Pump, Single Stage Double Suction Centrifugal Pump), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Non-self-Priming Clean Water Pump.
