The global Non-self-Priming Clean Water Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The non-self-priming clean water pump is a centrifugal pump, also called a single-stage centrifugal pump. Unlike self-priming clean water pumps, non-self-priming clean water pumps need to drain the liquid from the pump body before starting to work properly. Therefore, it is suitable for situations where the liquid level is relatively low and requires external water diversion or a suction pipe under the pump. The structure of the non-self-priming clean water pump is relatively simple, consisting of a pump body, an impeller, a bearing, a seal and other components. The pump body and impeller are usually made of cast iron or stainless steel, and the bearings and sealing parts are made of high-strength materials to ensure the stability and reliability of the pump.

This report studies the global Non-self-Priming Clean Water Pump production, demand, key manufacturers, and key regions.
