The global Non-standard Stamping Parts market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

As the name implies, non-standard stamping parts are non-standard stamping parts. They are not stamping parts formulated according to national unified standards and specifications, but stamping parts designed and manufactured by themselves according to their own uses and needs. Non-standard metal stamping parts are common metal structural parts, with good plasticity, conductivity, stretchability, high precision, beautiful appearance and other practical features, and their applications are very wide. When selecting materials for non-standard stamping parts, the first thing to do is to meet the use requirements of the workpiece: strength, stiffness, electrical conductivity, thermal conductivity, importance, corrosion resistance, etc. To meet the stamping process conditions, it should have good plasticity and surface quality, and the thickness of the sheet.
