## Abstracts

According to our (Global Info Research) latest study, the global Non-Steerable Antenna market size was valued at USD 3395.5 million in 2022 and is forecast to a readjusted size of USD 5516.1 million by 2029 with a CAGR of 7.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A non-steerable antenna, also known as a fixed antenna, is an antenna that is designed to operate in a specific direction and cannot be electronically or mechanically steered to change its direction. Unlike steerable antennas, non-steerable antennas are fixed in a specific position and cannot be adjusted to change the direction of their radiation pattern. They are typically simpler and less expensive than steerable antennas, and they are often used in applications where a fixed directional coverage area is sufficient, such as in broadcast, point-to-point communication, and satellite communication systems. Non-steerable antennas may be designed with various types of radiation patterns, including directional, omnidirectional, and sectorized patterns.
