According to our (Global Info Research) latest study, the global Non-Tactile Membrane Switches market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Non-tactile membrane switches do not provide a physical, tactile response when pressed. Because tactile feedback cannot be felt, activating a non-tactile switch typically triggers a sound or light to indicate that the function has been performed. Because additional layers intended to provide a tactile response are not required by non-tactile membrane switches, these devices tend to be the least expensive option for product interaction.
