Abstracts

The global Non-tobacco Disposable E-cigarettes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The growing demand for non-tobacco products owing to rising health concerns among consumers is expected to drive the market during the forecast period. According to an article published by National Library of Medicine, in February 2022, the use of disposable e-cigarette among young adults in the U.S. increased to 50.2% from a former base line of 22.1%. Such data suggest a positive outlook for the growth of the industry. Growing consumer awareness about degenerating effect of tobacco consumption is expected to drive the market in the forecast period.

Disposable e-cigarettes are convenient, accessible vapes that are ready to smoke as soon as you unwrap them. They can't be recharged or refilled with e-juice and are recycled and repurchased after use. They're great for beginners and cheaper than rechargeable vapes, and they are safer, as they can't be modded. With no activation button, you can simply inhale and vape without the nonsense of filling in liquid, putting it together, or charging beforehand like some other vapes out there.

Non-tobacco Disposable E-cigarettes work and feel just like a traditional vape, but with no nicotine added in the e-liquid.

This report studies the global Non-tobacco Disposable E-cigarettes production, demand, key manufacturers, and key regions.
