The global Non Wall Mounted Borehole Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Non wall mounted borehole detectors are geophysical instruments used to detect and measure underground features and structures. It is designed to be deployed in boreholes, which are narrow holes drilled underground for geological or geophysical exploration. Unlike wall mounted borehole detectors permanently installed in boreholes, non wall mounted borehole detectors are designed for deployment and retrieval as needed. This makes them more flexible and versatile than wall mounted detectors, as they can be used for a wider range of drilling sizes and configurations. The non wall mounted borehole detector can be used to measure various underground characteristics, including seismic velocity, conductivity and magnetic susceptibility. They are usually used in mineral exploration, groundwater research, geotechnical investigation and other applications.
