Abstracts

The global Non-water Miscible Coolant Lubricants market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Non-water-miscible coolant lubricants have some advantages compared to water-miscible types. Thanks to their generally higher kinematic viscosity, they have a good lubricating effect. Besides this, they are characterized by a high pressure susceptibility and good corrosion properties. Another advantage is that with non-water-miscible coolant lubricants no biocides are required for fighting bacteria and fungal attack, as they are virtually germ-free and resistant to bacteria. Their service life is thus considerably longer than that of water-miscible coolant lubricants.

One drawback of non-water-miscible coolant lubricants is that their cooling effect is very slight due to the low specific heat capacity and thermal conductivity compared to water-miscible coolant lubricants. Another problem is posed by oil mist which may be generated when using oils, primarily at high cutting speeds. The aerosols contained within this can lead to health risks in the lungs. Furthermore, oil mist is easily inflammable under certain circumstances, thus rendering adequate safety measures necessary.

This report studies the global Non-water Miscible Coolant Lubricants production, demand, key manufacturers, and key regions.
