Abstracts

The global Non-woven Geotextile market size is expected to reach \$ 6846 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

Non-woven geotextile is a permeable geosynthetic material manufactured primarily from polypropylene (PP) or polyester (PET) fibers through needle-punching or thermal bonding processes. It offers excellent permeability, filtration, separation, and reinforcement properties, and is widely used in infrastructure construction fields such as road engineering and bridge engineering. In 2025, global non-woven geotextile production reached approximately 2633.43 kilotons.

The industry chain of non-woven geotextile starts with petrochemical raw materials such as polypropylene and polyester fibers upstream, followed by spinning and needle-punching or thermal bonding manufacturing processes midstream, and downstream applications in infrastructure sectors.

The growth of the non-woven geotextile market is primarily driven by increasing global infrastructure investment, accelerated urbanization, and stricter environmental and water management requirements. Large-scale road, railway, and hydraulic projects in emerging economies and Belt and Road regions continue to expand demand. Meanwhile, initiatives such as sponge city development, landfill upgrades, and ecological restoration projects are boosting the need for high-performance geosynthetics. Compared with traditional granular solutions, non-woven geotextiles provide longer service life and lower maintenance costs, further enhancing their penetration in engineering design and construction.

This report studies the global Non-woven Geotextile production, demand, key

manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Non-woven Geotextile and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
