According to our (Global Info Research) latest study, the global Non-woven Wall Covering market size was valued at US\$ 4116 million in 2025 and is forecast to a readjusted size of US\$ 5753 million by 2032 with a CAGR of 4.9% during review period.

Non-woven wall covering refers to a type of wall decorative material made from non-woven fabric composed of natural cellulose fibers (such as wood pulp) and synthetic fibers, bonded together through mechanical, thermal, or chemical processes rather than traditional weaving. It is widely used in interior decoration due to its breathability, dimensional stability, ease of installation, and environmental friendliness. Compared with traditional paper-based wallpaper or vinyl wall coverings, non-woven wall coverings are more resistant to tearing, easier to apply and remove, and less prone to shrinking or bubbling after installation. They are commonly used in residential interiors, hotels, offices, and commercial spaces where both aesthetic performance and functional durability are required.

In 2025, the sales volume of Non-woven wall covering is 1 billion square meters, the unit price is 4 USD per square meter, and the gross profit margin is 30%.
