According to our (Global Info Research) latest study, the global Nondestructive Testing Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Nondestructive Testing Services uses the characteristics of sound, light, magnetism, and electricity to detect the presence or absence of defects or non-uniformities in parts and components without damaging or affecting the performance of the detected object, and gives the size, location, and performance of the defect And quantity information, and then the general name of all technical means to determine the technical status of the subject.

Nondestructive Testing Services has the following characteristics. The first is non-destructive, because it will not damage the performance of the test object when it is tested; the second is comprehensive, because the test is non-destructive, so 100% of the test object can be fully tested when necessary This is not possible with destructive testing; the third is full-scale. Destructive testing is generally only applicable to the detection of raw materials. For finished products and in-use supplies, unless they are not ready to continue service, they cannot be destructive. The performance of the test, and nondestructive testing does not damage the detected object.
